Automation solutions
with 40 years of experience

SERMATECH

Customer-driven solutions for production automation with over 40 years of experience

Sermatech, founded in 1976, is a versatile provider of solutions and services in production automation. We employ 50 people in Ulvila, Rauma and Raisio.

As a full service automation house we offer our clients complete production cells and lines as a turnkey service. We also deliver parts and single pieces of equipment from pre-planning to life-cycle maintenance. Our long-standing customer relationships speak of trust in our expertise and professionalism.

Our solutions utilize for example robotics and high-technology machine vision solutions, resulting in cost-effective production technology.

Automatization is a fast-growing and developing trend for exaple in heavy industry and health care. This means growing demands from the market. Keeping an eye on any future needs, Sermatech continually trains its staff as well as improves its services to be ever more extensive and client-driven.

We are ABB Value Provider partner.

Functional and customer-driven solution requires wide-ranging expertise and flexibility from the supplier

Our broad experience and extensive professional skills ensure first-rate solutions for our customers in the most demanding deliveries.

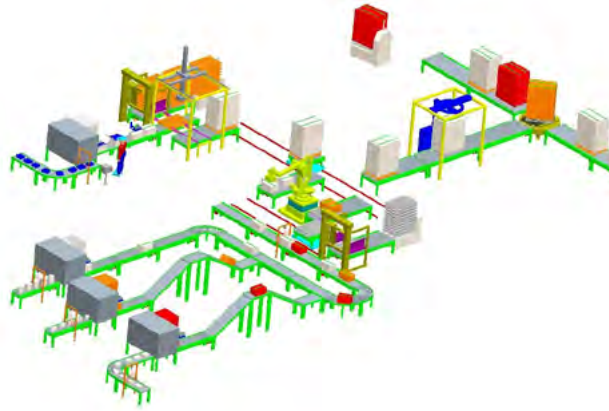

Our service selection covers all key areas of production automation: electrical, automation and mechanical engineering as well systems programming and machine vision solutions.

Together with our skilled and motivated installation team, this makes us a reliable solution provider for the varied needs of production automation.

Quality, environment and safety

Sermatech's operation is certified for ISO 9001, 14001, and 45001 by an external auditor. This means we take great care of quality, environment, and occupational safety & health details in our operation.

Our value proposition

Customer need → Solution → Product → Service

We provide solutions helping our customers to streamline their operation in many ways. Whether it is increasing or boosting production, cutting production costs, improving the quality of products and services, saving energy and environment, improving work ergonomics or occupational safety or any other cost savings and benefits of automation.

We serve our customers throughout the life-cycle of the equipment to ensure our customers the maximum benefit from our services.

- Packaging cells
- Assembly cells
- Robot applications
- Product identification solutions: machine vision, 3D scanners, barcodes, RFID
- Quality control solutions: measuring, scanning, traditional machine vision, and other forms of imaging
- Automation projects and control solutions
- Conveyor solutions and material processing
- Maintenance services
- Modernizations (mechanical, electrical and automation, safety equipment etc.)

Production development

Manufacturing systems and work phases

Performing a certain work phase in a new way can sometimes have a significant effect on production costs, quality and production capacity. We have successfully developed manufacturing solutions for our customers in a wide range of industry sectors.

Quality control

Registering and correcting any quality deviations as early as possible is essential for any manufacturing process. Sermatech Group has an extensive experience in quality control solutions implemented with various technologies.

Product development

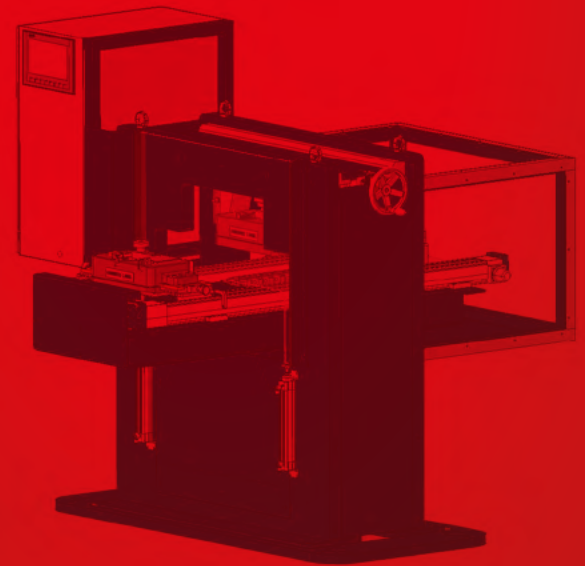

We also have a long knowledge from developing end products for our customers. The biggest benefits from production development are achieved when the product itself can be improved to match the production system in the best possible way.

- Machine vision, laser and contact measuring
- Data collection and reporting and IoT solutions
- 3D layout engineering

In turnkey deliveries we assume responsibility of the entire project

We supply our customers with high-quality, productivity-enhancing system deliveries on a turnkey basis. The customer's needs are always the starting point, leading to a cost-efficient process, reliable delivery schedule and high overall quality.
